KTM Filter-Kone™

- Special cone shape design allows easier downward freefall of pulsed and collected particles
- Lower interstitial velocity between filters (means greater spacing between filters)
- Tried and tested "Snap-band" design for a "sure" seal with quick & easy replacement
- Positive seal system with top plate gasket
- Fits into existing square top filter guides/rails in most dust collectors
- No pleats to plug or pack
- Surface geometry allows dust to be expelled outside of filter periphery, unlike pleated filters.
- Kone-design means dust does not attract to adjacent filter, and falls freely into hopper
- Less than 1 minute to change out replacement Kone
- Reduced compressed air consumption
- Lower air pressure required for pulse cleaning.
- Better design of surface area & geometry for higher airflow, means each lower pressure pulse is more effective. A/C ratio is unaffected by design.
- Designed to fit "Kraemer" and other dust collector types that use vertically hung cartridges
- Polyester, Acrylic, Teflon media for efficient filtration.
- Disposal & storage in a fraction of the space. (1/40th)
- 2 of 3 components reusable, saving future cost.

It's a new idea for an old problem ... a simpler surface geometry which stays clean, doesn't plug and simply works! All at a cost that fits your budget.

Disposal is also cheaper, 40 Filter-Kones fit in a single garbage bag, 40 new filters fit in the same space of one cartridge...try that with 40 pleated cartridges!

*Isn't it time to stop using those expensive and plugged, pleated filter cartridges, that are designed only to delay the air pulse & **hold-in** the dust and dirt; by easily switching over to an easier & better, more simple and less costly filtering method?*

*Replace cartridges easily with the new **KTM Filter-Kone System™** from Kraemer Tool at less than half the cost! No more packed pleats and clogged filters. Better surface geometry uses less compressed air, changes out in under a minute, lasts just as long or longer than conventional design cartridges. Isn't it time think outside the pleat by getting better value for your dollars?? You can with the revolutionary new **KTM Filter-Kone System™**!*

Reuse the top plate, keep the inner expander cage, throw away just the disposable Kone on the first change when it is worn, not when it's plugged for greater savings on your first filter change!

Replacement Costs:

OEM:	\$125.00
Farr Gold:	\$250.00
FilterKone:	\$24.99

**Saving you \$\$
with each pulse!**
